Antimicrobial coatings for signage

Q-COAT Antimicrobial Coatings are a series of high performance coatings for metals, plastics and many other substrates formulated with silver ions to inhibit the growth of microorganisms in or on the paint film. Unlike "post applied" disinfectants, which provide a limited residual benefit once the surface dries, this

technology works to continuously minimize microorganisms. Its low-VOC high performance resins and UV non-fading pigments provide a highly durable and environmentally friendly coating. Works with any QHF coating and can be brushed, rolled or sprayed.

Non-vinyl wrap film from 3M

3M Envision Print Wrap Film Lx480mC is a removable print wrap film that contains no vinyl or phthalates yet is designed to be highly conformable and optimized for tack and slideability. It is meant to give sign companies and their customers a greener, more sustainable option to conventional vinyl film for wall wraps and vehicle graphics.
